Exposure controls

Appropriate engineering controls

Handle in accordance with good industrial hygiene and safety practice. Wash hands before breaks and at the end of workday.

Personal protective equipment

Eye/face protection

Safety glasses with side-shields conforming to EN166 Use equipment for eye protection tested and approved under appropriate government standards such as NIOSH (US) or EN 166(EU).

Skin protection

Handle with gloves. Gloves must be inspected prior to use. Use proper glove removal technique (without touching glove's outer surface) to avoid skin contact with this product. Dispose of contaminated gloves after use in accordance with applicable laws and good laboratory practices. Wash and dry hands.

The selected protective gloves have to satisfy the specifications of Regulation (EU) 2016/425 and the standard EN 374 derived from it.

Body Protection

Impervious clothing, The type of protective equipment must be selected according to the concentration and amount of the dangerous substance at the specific workplace.

Respiratory protection

Where risk assessment shows air-purifying respirators are appropriate use a full- face respirator with multi-purpose combination (US) or type ABEK (EN 14387) respirator cartridges as a backup to engineering controls. If the respirator is the sole means of protection, use a full-face supplied air respirator. Use respirators and components tested and approved under appropriate government standards such as NIOSH (US) or GEN (EU).

Control of environmental exposure

Prevent further leakage or spillage if safe to do so. Do not let product enter drains. Discharge into the environment must be avoided.

Toxicity

A hallucinogenic (psychedelic) agent. It may catalyze the onset of emotional problems or psychosis in predisposed individuals. Although the mechanism of action for hallucinogens is not understood, DOM is believed to act by being an agonist at serotonin 5-HT₂ receptors. It causes hyperreflexia, restlessness, and perceptual alterations in illusions, including changes in touch, taste, and odor, and the thinking process is substantially altered. At high doses, hallucinations and loss of contact with reality result. The duration of action may be 16-24 h. Its LD₅₀ is in mice 36 mg/kg, i.v., in rats 32.5 mg/kg, i.p., in dogs 7.2 mg/kg, i.v., and in monkeys 8 mg/kg, i.v.
