Persistence and degradability

Half-lives in soils were reported as 1-8 days(1).

Bioaccumulative potential

An estimated BCF of 1.4 was calculated for butocarboxim(SRC), using a log Kow of 1.1(1) and a regression-derived equation(2). A BCF of 42 has been reported for aldicarb(4), a pesticide with a similar structure to butocarboxim. According to a classification scheme(3), BCF values <30 suggest a low potential for bioconcentration in aquatic organisms and values of 30-100 suggests the potential for bioconcentration in aquatic organisms is moderate (SRC), provided the compound is not altered physically or chemically after being released into the environment (SRC).

Mobility in soil

Using a structure estimation method based on molecular connectivity indices(1), the Koc for butocarboxim can be estimated to be 37(SRC). According to a classification scheme(2), this estimated Koc value suggests that butocarboxim is expected to have very high mobility in soil.

Other adverse effects

no data available

SECTION 13: Disposal considerations

Disposal methods

Product

The material can be disposed of by removal to a licensed chemical destruction plant or by controlled incineration with flue gas scrubbing. Do not contaminate water, foodstuffs, feed or seed by storage or disposal. Do not discharge to sewer systems.

Contaminated packaging

Containers can be triply rinsed (or equivalent) and offered for recycling or reconditioning. Alternatively, the packaging can be punctured to make it unusable for other purposes and then be disposed of in a sanitary landfill. Controlled incineration with flue gas scrubbing is possible

for combustible packaging materials.
